

DOMINO

Ergonomic base

The base is equipped with sophisticated technical elements to allow the slats to adjust accurately and optimally to the curves of the spine.

Sophisticated firmness adjustment sliders can be used to customize the base in the lower back area.

Firmness adjustment sliders, view from below.

The shape of the protruding slat suspensions ensures the edge of the mattress is supported appropriately.

These sophisticated triple suspensions made of thermoplastic rubber (TPE) allow each group of slats to adjust accurately to the body shape.

The shape of the protruding slat suspensions ensures the edge of the mattress is supported appropriately.

The shoulder area has softer suspensions for a better shoulder embrace when sleeping on the side.

Thickened moulded steel frame with metal alloy corners for a modern design. Flexible surface composed of 42 individual convex laminate wood slats. Slats are fitted in the counter-frame with thermoplastic rubber (TPE) triple suspensions. Sophisticated firmness adjustment sliders on nine slats, allowing to customize the comfort level of the base in the lower back area. Four thermoplastic rubber (TPE) triple suspensions are fitted in the shoulder area to accommodate the shoulder. Steel screw-on legs (Ø 50mm), provided with non-slip feet, fitted to the corner plates. All metal components are covered with nontoxic and scratch-resistant epoxy powders.

The close proximity of side suspensions at the centre of double bases guarantees flexibility and uniformity of the base.

Standard and non-standard heights available.
