

# RESPIRO 100% MACRO - PERFORATED NATURAL LATEX

HEAD ZONE	SHOULDER ZONE	LOWER BACK ZONE	HIP ZONE	THIGH ZONE	CALF ZONE	FOOT ZONE
<p>The biomechanics in a mattress ensure the correct position of the human spine both for those who sleep on their back and those who sleep on their side, and they relieve pressure in the contact points between body and mattress.</p>				<p><b>respiro® 100% natural - macro-perforated latex</b> perfectly meets this principle, with seven comfort zones and a special convoluted sur-face texture that makes it soft to the touch and at the same time progressively resistant under pressure.</p> <p>Moreover, with <b>respiro® 100% natural - macro-perforated latex</b>, changing position during sleep re-quires less effort, so you wake up full of energy.</p>		

The differing firmness levels on either side of **respiro® 100% natural - macro-perforated latex** result in two comfort levels: soft and medium-soft (bi-comfort).

The ingenious **respiro® 100% natural - macro-perforated latex** ventilation system, composed of a network of pinholes and conventional ducts with blind holes, facilitates continuous ventilation inside the mattress to ensure correct temperature regulation and dispersal of natural body perspiration while also preventing the proliferation of bacteria.

**Vertical ducts with pinholes: total ventilation.**  
The pinholes and the unique surface shape guarantee that heat and perspiration are well balanced. In the shoulder area these ducts direct and distribute air and moisture both vertically and horizontally.

**respiro® 100%**  
MACRO-PERFORATED LATEX  
100% natural organic latex core
