

AQUAPURE ONDA AND BODYFORM HD

HEAD ZONE	SHOULDER ZONE	LOWER BACK ZONE	HIP ZONE		THIGH ZONE	CALF ZONE	FOOT ZONE
Particularly elastic area, able to provide the correct support, favouring muscle and spine relaxation, regular blood circulation, and good breathing.	This area is the result of an in-depth study with the goal of designing a system able to effectively accommodate the shoulder and relieve pressure, a fundamental feature for those who sleep on their sides. The unique Aquapure ® interlocking inserts structure allows for a pleasant accommodation of shoulder and arm. In this way the spine and the head can maintain a correct posture, facilitating muscle relaxation pressure relief, often the cause of unpleasant numbness.	Important supporting and elastic area, capable of sustaining the lower back to encourage correct spine posture.	Controlled hip cushioning is made possible in this area by the Aquapure ® interlocking widened inserts structure.		Elastic and supporting area, capable of sustaining the lower end of thighs in order to prevent the lower spine from overarching. This generates a beneficial decrease of pressure on the spinal discs.	Relatively soft area, suitable for supporting calves without compressing them, to prevent one of the main causes of tingling and swelling in the lower limbs.	Elastic contact point for the feet, to promote adequate blood and lymphatic circulation giving a sensation of relief to the whole body.

The differing firmness levels on either side of **Aquapure**® with **Bodyform**® HD result in two comfort levels: soft and medium-soft (bi-comfort)

The exclusive **Bodyform**® HD wave surface in seven variable patterns significantly increases comfort for the whole body. The empty canals crossing the **Aquapure**® structure and the **Bodyform**® HD micro-pinholes facilitate air flow inside the mattress. Furthermore, they make the mattress easy to bend and thus suitable for adjustable bases.

BODYFORM HD

The **Bodyform**® HD element with exclusive wave surface and seven variable patterns provides the correct support of the entire body.

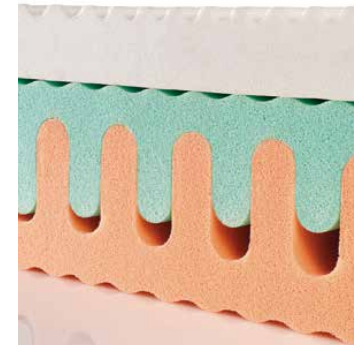

Bodyform® HD is an innovative viscoelastic foam, both heat sensitive and self-shaping.

AQUAPURE®

The two components of the **Aquapure**® structure are interlocked without the use of glue or other adhesives.

Shoulder area designed to allow a pleasant accommodation of shoulder and arm to avoid unpleasant numbness.
