

MICRO POCKETED SPRINGS AND BODYFORM HD SOYA & ALOE SEVEN COMFORT ZONES

HEAD ZONE	SHOULDER ZONE	LOWER BACK ZONE	HIP ZONE		THIGH ZONE	CALF ZONE	FOOT ZONE
Particularly elastic area, able to provide the correct support, favouring muscle and spine relaxation, regular blood circulation, and good breathing.	When sleeping on the side, the shoulder must be properly accommodated to allow the spine and the head to maintain a correct position, facilitating muscle relaxation and blood circulation. To allow the mattress to effectively meet these needs, coils in the shoulder area are softer.	One of the most fragile areas of our body is the lower back region. In this area, coils are firmer and more elastic to support the lower back and encourage correct spine posture.	The heaviest part of our body while sleeping, the hips, should be appropriately embraced by the mattress, however it should not sink too much. Coils in this area correctly support the body but are not too firm to avoid unnecessary discomfort.		Elastic and supporting coils, capable of sustaining the lower end of thighs in order to prevent the lower spine from overarching. This generates a beneficial decrease of pressure on the spinal discs.	Relatively soft coils, suitable for supporting calves without compressing them, to prevent one of the main causes of tingling and swelling in the lower limbs.	Lying on an elastic surface, feet can maintain good blood and lymphatic circulation giving a sensation of relief to the whole body.

The differing firmness levels on either side of the structure, thanks in combination with **Bodyform® HD Soya & Aloe**, result in two comfort levels: soft and medium-soft (bi-comfort).

The exclusive **Bodyform® HD Soya & Aloe** wave surface in seven variable patterns significantly increases comfort of the whole body. The empty spaces between coils, together with **Bodyform® HD Soya & Aloe** micro-pinholes, facilitate air flow inside the mattress.

Controlled compression pockets

Each spring steel coil is barrel-shaped. Placed under pressure, i.e. compressed by about 20%, it is packed in durable, air permeable, and hypo-allergenic fabric.

A complex system of independent forces

Pocketed coil rows are then assembled with a process that creates perfect alignment, avoids contact, and ensures the individual movement of each single coil. A perimetral steel rod keeps the structure together.

Large number of coils for excellent performance

The higher the number of coils, the better performance and comfort. This simple rule is at the foundation of Somnium design for this technology. The user can enjoy the effect of over 610 micro-coils per square meter, the so-called 1000/2000 system.

Seven comfort zones

The use of coils with different gauges allows the mattress to respond dynamically to body shape and movement.

The **Bodyform® HD Soya & Aloe** element with exclusive wave surface and seven variable patterns provides the correct support of the entire body.

Bodyform® HD Soya & Aloe is an innovative visco-elastic foam, both heat sensitive and self-shaping.

MICRO-POCKETED SPRINGS MATTRESSES WITH REMOVABLE COVER

Ergonomic seasonal

- TENTAZIONE MICRO with 3D VS. underlining
- TENTAZIONE MICRO with antistress underlining
- DOLCEVITA MICRO
- DOLCENOTTE MICRO
- DOLCEFARNIENTE MICRO

Ergonomic hypo-allergenic

- LUNAROSSA MICRO with 3D VS. underlining
- LUNAROSSA MICRO with antistress underlining
- LUNACHIARA MICRO
- LUNANUOVA MICRO
